The sequence may extend beyond the ends of the clone and there may esquence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_di
NOTE: This is a 'working draft' sequence. It currently
consists of 2 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOTE: Estimated insert size may differ from sequence length

                                                                                        AAZ21481 to AAZ21495 represent fragments of the human sensory neurone specific 2a (SNS-2a) nucleotide sequence. SNS-2a is a sodium channel protein. SNS-2a can be used in a method for the identification of a modulator of a sodium channel, and for assaying for compounds which modulate sodium flux. The sodium channel modulators can be used in a medicament for the treatment of pain or hypersensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sensory neurone specific 2a; SNS-2a; sodium channel protein; pain; voltage gated; hypersensitivity; ss.

The SCN12A/SCN12A-s gene is found on chromosome 3p23-21.3 and the SCN8A gene is found on chromosome 12q13.1. The sodium ion channel subunit proteins are useful in studying physiological mechanisms relating to excitatory cells and in drug development. The sodium ion channel subunit proteins are useful for treating diseases such as familial hyperglycaemia, QT extending syndrome type 3 and motor endplate diseases. The present CDNA sequence encodes the human SCN12A-s sodium channel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sodium channel alpha subunits SCN12A and SCN8A of human nervous system together with splicing variants, useful in studying physiological mechanism relating to excitatory cells and in drug development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 7; Page 55-70; 118pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of cDNA encoding a novel human tetrodotoxin CC resistant sodium channel, termed NaN (see AAR20121). The cDNA was CC isolated from a human dorsal root ganglia tissue cDNA library by PCR CC amplification (see also AAR30122-23). NaN belongs to the a-subunit CC current. Such channels underlie the generation and produces a TTX-R sodium CC current. Such channels underlie the generation and propagation of CC impulses in excitable cells such as neurons and muscle fibres. CC Preferential expression of NaN on sensory neurons innervating the body CC (dorsal root ganglia) and the face (trigeminal ganglia), but not on other neurons, makes it a very useful target for diagnostic and/or therapeutic CC uses in relation to acute and/or chronic pain pathologies. A claimed CC in a human or animal subject involves administering an agent that alters conscium current flow through NaN channels, or which modulates conscium current flow through NaN channels, or which modulates conscium current flow through NaN channels, or which modulates conscium current flow through NaN channels, or which modulates conscium current flow through NaN channels, or which modulates conscium channel security to correct conscium current flow through NaN channels, or which modulates conscium channel expression or continued in the recombinant production of NaN polypeptides.
                                                                                                                                                                                                                                                                          Query Match

The present invention describes an expression vector comprising a nucleic cold sequence that encodes a mammalian Na v 1 9 sodium channel protein or clis fragment, and producing a sodium current when transfected in a cell. Cl Also described; (1) a recombinant cell comprising the plasmid selected comprising the cell or cell line that produces a Na v 1.9 composed comprising the cell or cell line that produces a Na v 1.9 composed cell that has been transfected with the expression vector; and (b) culturing the cell comprising the cell or cell that has been transfected with the expression of Na v 1.9 sodium channel protein comprising the cell or cell line produced by the method of composing the cell or cell line produced by the method to the agent; and cell by: (a) capable of modulating sodium current is indicative of an agent capable of modulating sodium current in a cell; and (4) a recombinant cell comprising the expression vector. The expression vectors are useful for the stable cloning and expression of the Na v 1.9 sodium channel at the mRNA and protein levels, and for producing sodium channel currents considered in the expression and the name of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Expression vector useful for stable cloning and expression of Nav1.9 sodium channel at the mRNA and protein levels comprises a nucleic acid sequence that encodes a mammalian Nav1.9 sodium channel protein or its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human Na v 1.9 sodium channel protein encoding cDNA SEQ ID NO:3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ADD32193;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ADD32193 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                         The invention comprises the amino acid and coding sequence of three sodium channel subunits from the human nervous system (SCN12A, SCN12A-s and SCN8A). The SCN12A/SCN12A-s gene is found on chromosome 3p32-21.3 and the SCN8A gene is found on chromosome 12q13.1. The sodium ion channel subunit proteins are useful in studying physiological mechanisms relating to excitatory cells and in drug development. The sodium ion channel subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial subunit prot

                       This is the nucleotide sequence of a partial cDNA clone which codes for a contion (see AAY06596) of human NAN, a previously unidentified voltage cated sodium channel protein that is preferentially expressed in dorsal croot ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R sodium current. The NAN channel cDNA was obtained from human DRG tissue cDNA by PCR amplification (see also AAX87620-22). Rat, mouse and human CMAN nucleic acids (see AAX8760-02) and polypetides (see AAX06596-98). The invention also includes expression vectors and ctransformed host cells, methods for identifying tissues and cells that cativity or NAN channel mRNA transcription or translation, and a method for using such agents to treat acute or chronic pain, paraesthesia and typerexcitability phenomena. The preferential expression of NAN in sensory DRG and trigeminal neurons provides a target for selectively modifying the behaviour of these nerve cells while not affecting other concerns calls in the brain and spinal cord. The gene is named SCNIla
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

              The present sequence is that of a partial cDNA for a novel human tetrodoctoxin resistant sodium channel, termed NaN (see AAB20125). The cDNA was isolated from a human dorsal root ganglia tissue cDNA library by PCR amplification (see also AAF30122-23). A full-length seeyence is given in AAF30101. Human NaN belongs to the a-subunit voltage-gated sodium channel protein family and produces a TTX-R sodium current. Such channels underlie the generation and propagation of impulses in excitable cells such as neurons and muscle fibres. Preferential expression of NaN on sensory, neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other neurons, makes it a very useful target for diagnostic and/or therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed method of treating pain, paraesthesia
                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid molecules encoding human tetrodotoxin resistant sodium channels, useful for preventing, diagnosing and treating pain, paraesthesia and/or hyperexcitability phenomena.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Dib-Hajj S,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         16-JUL-1999;

Nucleic acid molecules encoding human tetrodotoxin resistant sodium channels, useful for preventing, diagnosing and treating pain, paraesthesia and/or hyperexcitability phenomena.

The present sequence is that of cDNA encoding a novel

mouse tetrodotoxin

Example 3; Fig 7A; 162pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC resistant sodium channel, termed NaN (see AAB20124). The CDNA was CS isolated from trigeminal ganglia cDNA using primers (see AAB30120-21) CC based on rat NaN sequences. Mouse NaN shows 68% similarity to human NaN CC (see AAB20121). The gene encoding NaN, termed Scnila, is located on mouse CC chromosome 9. NaN belongs to the a-subduit voltage-gated sodium channel CC protein family and produces a TTX- subdium current. Such channels CC underlie the generation and propagation of impulses in excitable cells CC such as neurons and muscle fibres. Preferential expression of NaN on CC sensory neurons innervating the body (dorsal root ganglia) and the face CC (trigeminal ganglia), but not on other neurons, makes it a very useful CC target for diagnostic and/or therapeutic uses in relation to acute and/or CC chonic pain pathologies. A claimed method of treating pain, paraesthesia CC and/or hyperexcitability phenomena in a human or animal subject involves administering an agent that alters sodium current flow through NaN CC channels, or which modulates transcription or translation of NaN mRNA, in CC dorsal root ganglia or trigeminal neurons. NaN nucleic acids are used in CC channel expression or (antisense) to down-regulate NaN expression, in the diagnosis of disease, and in the recombinant production of NaN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Also described: (1) a recombinant cell comprising the plasmid selected from prNaN, pCMV-rNaN-GFP, pLG338XM-rNaN and the plasmid described above; (2) a method of making a cell or cell line that produces a Na v 1.9 sodium channel-dependent sodium current by: (a) providing a cell that has been transfected with the expression vector; and (b) culturing the cell under conditions that allow expression of Na v 1.9 sodium channel protein to produce a sodium current into the transfected cell; (3) a method of screening for an agent that modulates sodium current in a cell by: (a) exposing the cell or cell line produced by the method to the agent; where an alteration in the level of sodium current in a cell; and (4) a recombinant cell comprising the expression vector. The expression vectors are useful for the stable cloning and expression of the Na v 1.9 sodium channel at the mRNA and protein levels, and for producing sodium channel currents characteristic of native currents in dorsal root ganglion neurons. The present sequence encodes a mouse Na v 1.9 sodium channel protein, which

                                                                                                                                                                                                                                                                                                                                                                               CC Also described: (1) a recombinant cell comprising the plasmid selected CC from prNaN, pCWV-rNaN-GFP, pLG338XM-rNaN and the plasmid described above; CC (2) a method of making a cell or cell line that produces a Na v 1.9 sodium channel-dependent sodium current by: (a) providing a cell that has CC been transfected with the expression of Na v 1.9 sodium channel protein CC under conditions that allow expression of Na v 1.9 sodium channel protein CC conditions that allow expression of Na v 1.9 sodium channel protein CC screening for an agent that modulates sodium current in a cell; (3) a method of CC exposing the cell or cell line produced by the method to the agent; and CC exposing the cell of sodium current is indicative of an agent CC capable of modulating sodium current in a cell; and (4) a recombinant CC capable of modulating sodium current in a cell; and (4) a recombinant CC cell comprising the expression vector. The expression vectors are useful CC for the stable cloning and expression of the Na v 1.9 sodium channel at CC the mRNA and protein levels, and for producing sodium channel currents CC characteristic of native currents in dorsal root ganglion neurons. The current sequence encodes a rat Na v 1.9 sodium channel protein, which is

The protein is a sodium ion channel of the nervous system, and is highly expressed in plexiform and dorsal root ganglia. The protein can be used to identify inhibitors of sodium channel proteins that are resistant to tetrodotoxin (TTX). The inhibitors are potentially useful for treating epilepsy, stroke, diabetic neuropathy, traumatic injuries, AIDS-related neuropathy, and especially neuropathic pain, e.g. migraine and headache
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Type 5 sodium channel; PN5; nervous system; plexiform; dorsal root ganglia; tetrodotoxin; TTX; epilepsy; stroke; diabetic neuropathy; traumatic injury; AIDS-related neuropathy;

                                                                                                                                                                                       δ
                                                                                                                                                                                                                               This is the nucleotide sequence of an isolated nucleic acid which encodes the rat NaN channel (see AAY06596), a previously unidentified voltage gated sodium channel protein that is preferentially expressed in dorsal root ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R sodium current. The NaN channel cDNA was obtained from Sprague-Dawley rat DRG cDNA by PCR and RACE amplification (see also AAX87603-17). Rat, mouse and human NaN nucleic acids (see AAX87600-02) and polypeptides (see CC AAY06596-98) are provided. The invention also includes expression vectors and transformed host cells, methods for identifying tissues and cells that express NaN, methods for identifying agents that modulate NaN CC channel activity or NaN channel mRNA transcription or translation, and a method for using such agents to treat acute or chronic pain, paraesthesia and hyperexcitability phenomena. The preferential expression of NaN in Sensory DRG and trigeminal neurons provides a target for selectively modifying the behaviour of these nerve cells while not affecting other nerve cells in the brain and spinal cord. The NaN gene has been named
                                                                                                                          Matches 153;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          뭐
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                     cc sodium channel proteins) and NaN-specific primers (see also AAF30105-19), cc and RACE amplification. The open reading frame shows 73% similarity to the human NaN sequence (see AAF30101). NaN belongs to the a subunit cc the human NaN sequence (see AAF30101). NaN belongs to the a subunit cc current. Such channel protein family and produces a TTX-R sodium cc current. Such channels underlie the generation and propagation of cc impulses in excitable cells such as neurons and muscle fibres. Cc referential expression of NaN on sensory neurons innervating the body constant root ganglia) and the face (trigeminal ganglia), but not on other concerns, makes it a very useful target for diagnostic and/or therapeutic cuses in relation to acute and/or chronic pain pathologies. A claimed cc method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves administering an agent that alters codium current flow through NaN channels, or which modulates codium current flow through NaN mannels, or which modulates trigeminal neurons. NaN nucleic acids are used in gene therapy to correct construction of the negulate NaN expression, in the diagnosis of disease, cc and in the recombinant production of NaN polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of cDNA encoding a novel rat tetrodotoxin resistant sodium channel, termed NAN (see AAB20122). The cDNA was isolated from a dorsal root ganglia tissue cDNA library by PCR amplification using generic primers (from conserved resions of a-subunit sodium channel proteins) and NaN-specific primers (see also AAF30105-19),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid molecules encoding human tetrodotoxin resistant sodium channels, useful for preventing, diagnosing and treating pain, paraesthesia and/or hyperexcitability phenomena.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Rattus norvegicus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 1; Fig 1; 162pp; English.

                                                                                                                             The present sequence encodes rat sensory neurone specific 2a (SNS-2a). SNS-2a is a sodium channel protein. SNS-2a can be used in a method for the identification of a modulator of a sodium channel, and for assaying for compounds which modulate sodium flux. The sodium channel modulators can be used in a medicament for the treatment of pain or hypersensitivity
                                                                                                                                                                                                                                                                                                           Mammalian sodium channel protein for treating

The present invention describes a method

밁 Ś 밁 Ş 밁 Query Match Best Local Similarity Matches 153; Conserv compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention. Sequence 93, Application US/60163080
Sequence 93, Application US/60163080
GENERAL INFORMATION:
APPLICANT: BONAZZI, VIVIEN
TITLE OF INVENTION: ISOLATED HUMAN ION CHANNEL PROTEINS,
TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING HUMAN INTITLE OF INVENTION: AND USES THEREOF
FILE REFRENCE: CL000136
CURRENT APPLICATION NUMBER: US/60/163,080
CURRENT FILING DATE: 1999-11-02
NUMBER OF SEQ ID NOS: 760
SOLTMARE: FastSEQ for Windows Version 4.0
SEQ ID NO 93
LENGTH: 614
TYPE: DNA
ORGANISM: Human
